**suppose if student answer the question in the form of picture then you will see like this**

Question Type	Question	Option1	Option2	Option3	Option4	Option5	Correct	Answer	Attachment	Ma
Subjective	<b>Section A</b> Read the given passage and answer the questions 1 to 4 that follows: $\Delta G$ gives a criteria for spontaneity of a process at constant pressure and temperature. Change in Gibbs energy also changes equilibrium constant. If $\Delta G$ is positive then the reaction is non-spontaneous and if it is negative then the reaction is spontaneous. (1) Give the relation between $\Delta G$ and equilibrium constant $K_c$ .						<input type="checkbox"/>		Show Attachment	0.00
Subjective	(2) What is the significance of Gibbs free energy?						<input type="checkbox"/>		Show Attachment	0.00
Subjective	(3) Predict the value of $\Delta G$ at equilibrium.						<input type="checkbox"/>	The value of $\Delta G$ at equilibrium is zero		0.00
Subjective	(4) How do you find the relation between entropy and Gibbs free energy?						<input type="checkbox"/>		Show Attachment	0.00
Subjective	<b>Questions 5 to 10 are one word answers:</b> (5) What will be the mass of one atom of C-12 in grams?						<input type="checkbox"/>		Show Attachment	0.00

Then Click on Show attachment button. This will be popup to you
